Lunati® Signature Series Valve Springs

Maximum valve train control plus round-winning reliability

No single race engine component is more critical than valve springs. Lunati's new Signature Series Valve Springs deliver maximum performance plus reliability for winning round after round in Pro or Sportsman drag racing classes.

Signature Series Springs feature the finest quality chrome silicon, steel alloy spring wire that has been carefully inspected and cleaned to eliminate dirt and foreign matter. Each spring is precision wound to exact print specs, micro-shot peened to relieve surface stress risers, and carefully heat treated for reduced tension loss. Select Lunati Signature Series Springs are also nitride processed for added valve lift loading and increased spring life. These premium quality valve springs are absolutely the finest available for any drag racing application.

Signature Series Springs are available in a variety of designs and outside diameters to suit almost any engine application. Included are: Single Springs with flat internal dampers in 1.260" OD; Dual Springs with and without dampers, from 1.300" to 1.625" OD; and Triple Springs in 1.645" to 1.725" O.D. Signature Series Valve Springs are also available in the Ovate Beehive design. These are made from a unique ovate shaped, multi-arch wire that places additional material on the inner diameter of the spring for greater tension and spring life.

Lunati Signature Series Valve Springs are sold in tension-matched, hand-inspected sets, ready for installation. They are also available in complete Signature Series Valve Spring Kits that include tension-matched Signature Series Valve Springs, machined steel or titanium retainers, and super strength, heat treated 7 or 10-degree valve locks.

For more information about the Lunati Signature Series Valve Springs or any other Lunati product, call 662-892-1500, or visit us at www.lunatipower.com.
