

PerfectMatch Rebuild Kits

There is no better way to improve the look of your engine bay than by replacing all of the old, beat up, or rusted metal accessories and covers. Whether you are performing a complete factory restoration or a stealthy Pro-Touring build, Trans-Dapt's PerfectMatch products give you the high-quality replacement parts with the show-stopping appearance you are looking for.

Helping to set PerfectMatch products apart from the competition is their powder coated finish. Paint can fade, crack, peel, or flake off, especially with the extreme heat found under the hood. Powder coating is stronger, lasts longer, and retains its brilliant luster much better over time. They are also easier to maintain than a chromed or polished piece as the powder coating doesn't require any special polishing or cleaning to maintain its looks.

PerfectMatch oil pans, water necks, engine pulleys, radiator support panels & bars, timing chain covers, valve covers, valve caps & breathers, alternator brackets, and air cleaners are available for a variety of GM and Ford applications. Available in Ford Blue and Chevy Orange, their colors match the original production factory pieces of these vehicles, with some of the GM applications available in Asphalt Black as well.

Features:

- Brightens up the engine bay
- Comes in various production colors for factory appearance
- Powder coating finish is stronger, last longer
