Powermaster Performance Presents Full Line of LS Starters

West Chicago, IL

Powermaster Performance of West Chicago, Illinois, is proud to offer a full line of high performance starters for the GM LS series engine. From stock upgrades all the way to 18:1 compression race engines, Powermaster has the LS covered.

Powermaster's newest addition to the LS starter line up is their lightweight Powermax Starter, part number 9109. Designed for high torque in a lightweight package, the Powermax features a permanent magnet design while producing higher cranking torque with low amperage draw for engines up to 10:1 compression. A 1.2kw starter motor and 6:1 planetary gear ratio result in a 7.5lb starter that packs a big punch in a small package. To assist in mounting the starter there are 12 different clocking positions to allowing starter to fit in even more positions and to clear headers, kick out oil pans, factory cooling lines, and more.

For more information on this small wonder, contact Powermaster Performance at 630-957-4019 or tech@powermasterperformance.com
