The AMK Compressor

In a continual effort to improve air suspension technology, Ridetech has recently chosen the new AMK compressor to be bundled with 5 gallon compressor systems. This compressor has an improved flow rate with less noise and proves to be a simpler solution to a 2 compressor system with no compromises. The compressor is available to purchase as a separate unit or as an upgrade to a Ridetech 3 gallon compressor system.

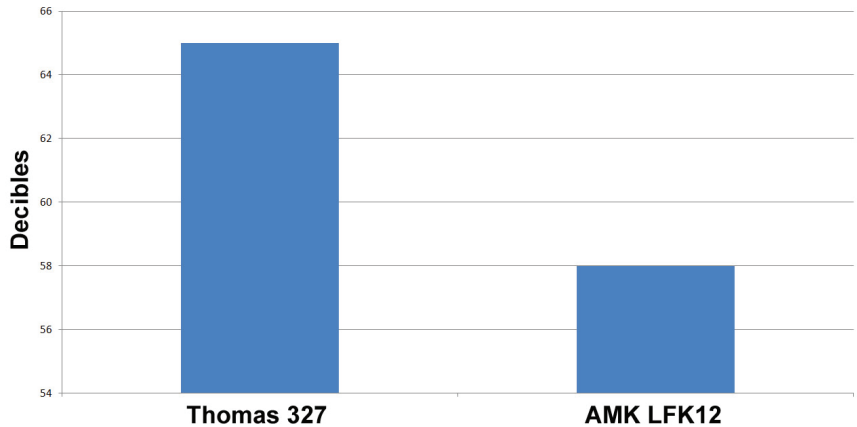

AMK compressor output is more than double of the previous Thomas compressors. This is the same basic unit that is used on several European luxury cars such as BMW and Mercedes to operate their air suspension systems. The AMK compressor is quieter, more powerful, and draws less power than the standard compressor. Only one AMK compressor is required to fill a 5 gallon tank. The kit includes the mounting feet, filter, wiring plug with fuse, and a 1/4" outlet fitting.

General Features:

- Double the air volume over the Thomas 327 compressor
- Quieter operation
- Less amp draw
- Used by Mercedes and BMW in OEM air suspension systems

For more information about the AMK compressor, call 812.481.4797, email sales@ridetech.com, or go online to ridetech.com.
