Flex-a-lite® 2010-2011 Camaro Radiator and Fan Combos Now Shipping!

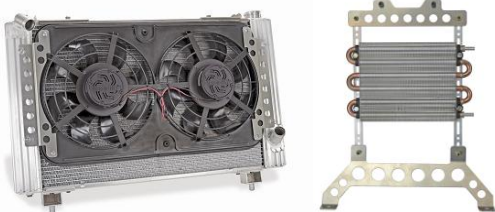

Fife, WA – Flex-a-lite® is now shipping its all-new, bolt-in Flex-a-fit® radiator and electric fan combos for the 2010-2011 V8 Camaro. The Camaro is one of the hottest new cars a performance car enthusiast can purchase, and our aluminum radiator and electric fan combination will help keep yours cool as you add performance parts.

This radiator offers three times more cooling surface and twice the core thickness compared to the stock radiator for significantly better cooling. The radiator is all-aluminum and hand welded for better construction than the original composite radiator. The electric fan comes pre-mounted from the factory and utilizes the original fan wiring. Kit includes all brackets and hardware for the radiator, as well as a new radiator cap. The radiator is available by itself (part # 56418) or as a radiator and fan combination (part #56488) which includes a dual Flex-a-lite X-Treme S-Blade 3000 cfm electric fan (part #480).

Flex-a-fit radiators are manufactured in the U.S. with a 2-row, all-aluminum core hand welded to the side tanks with patented “T” channels to dissipate heat more efficiently. Radiator mounting brackets are included for direct bolt-in fit to the stock location, and the “T” Channels provide a more secure attachment for these mounting brackets.

Also available for the 2010-2011 Camaro is our direct-fit Flex-a-lite transmission cooler. Part #4116C includes a bracket system, fittings, hose and hardware needed for a clean installation in front of the radiator.
