

PowerPak Piston Assemblies for GM LS3/L92 4.100" Stroke Engines

Morristown, NC – MAHLE'S GM LS3/L92 4.100" stroke engine PowerPak piston assemblies are available in both high and low compression applications. Machined from MAHLE's exclusive stronger, lighter, low drag slipper skirt forgings, each of MAHLE's PowerPak pistons are made in America. Additionally, the ring grooves are machined on MAHLE-manufactured machinery resulting in the flattest, best sealing ring grooves in the industry.

Each piston is dual coated first with a Phosphate dry film lubricant to eliminate micro-welding, then the skirts are coated with MAHLE's proprietary Grafal® cushioning, anti-friction skirt coating. Every PowerPak assembly comes complete with dual coated pistons, German steel pins, race proven round wire locks and a performance ring set.

MAHLE, the world's largest piston manufacturer operates its U.S. Motorsports division in Morristown, TN. For more information, contact www.mahlemotorsports.com, or call toll free: 888-255-1942.
