

BORGESON

Steering You Forward

All new, all Borgeson Saginaw Vega 140 Manual Steering Box

Through a recent acquisition Borgeson Universal Company is now the original equipment manufacturer and re-manufacturer of Saginaw manual steering gears.

Borgeson is now manufacturing all new, OEM Vega 140 manual steering gears in their Torrington CT facility. This is the true OEM Vega gear built to the original specifications and drawings from Saginaw, not an off-shore oversized copy. Each gear features a new precision machined casting created from the original tooling, coupled with all new internals. Each gear is carefully assembled, inspected and tested to Borgeson's precise specifications.

Borgeson Universal Company is proud to carry forward the American heritage of Saginaw manual steering by manufacturing and supporting the line of Saginaw manual steering gears in the USA. With over 98 years' experience in precision manufacturing and machining Borgeson will apply its same standards of manufacturing excellence to the Saginaw manual steering line as it does its current line of quality steering components.

Borgeson Vega 140 Manual Steering Box \$335.00
