Powermaster Performance Introduces Vintage Looks with High Performance Starting

West Chicago, IL

Powermaster Performance introduces the new Vintage Torque starter for Ford Flathead engines. The Vintage Torque keeps the appearance of a stock Flathead starter and uses a powerful, lightweight permanent magnet starter motor with low amperage draw. At less than 50% the weight of a stock Flathead starter, the Vintage Torque delivers 75% more cranking power.

With a 1.5kw motor, and 4.4:1 gear ratio, the Vintage Torque provides up to 160 ft lbs of cranking torque for better starting. Ball bearings provide longer, more reliable use than factory style bushings. Available with a ratchet type drive for longevity on high compression engines.
