AIRRAID UBI System for GM A-Body Makes Custom Cold Air Systems Easy

AIRRAID has once again expanded our popular UBI (U Build It) intake systems to include components specifically designed for the popular '68-'72 GM A-Body, including such popular cars as the Chevelle, GTO, Cutlass, and Skylark. This new system provides an easy way to build your own Cold Air Intake System and has the flexibility to accommodate thousands of different engine combinations!

Designed to be used in conjunction with AIRRAID's other UBI system components, this new A-Body-specific bracketry allows the air filter to be mounted on either the driver or passenger side of the engine compartment. The metal Cold Air Dam design keeps the air filter isolated from hot engine compartment air while allowing the engine to breath in plenty of cold, fresh outside air. The built-in velocity stack further promotes airflow, and different versions of the kit can accommodate 3", 3.5", and 4" intake tubes. The kit also includes an oversize air filter that utilizes AIRRAID's SnythaFlow oiled filter media.

Please note this system is designed to be used in conjunction with other UBI components sold separately. This enables the user to design their own system according to individual needs without having to buy a bunch of extra components. With all of the different potential UBI combinations, the only limitation is the user's imagination!

Like the rest of the AIRRAID product line, this new A-Body UBI system is proudly made in the USA and backed by an exclusive No Hassle Lifetime Warranty. For more information, visit www.AIRRAID.com or call 800-498-6951.
