The title of the most popular engine for hot rodders and muscle car lovers alike has been awarded to the GM 350 small block. Likewise, GM's durable Turbo Hydromatic 350 and larger 400 have been deemed some of the most common automatic transmissions. Jiffy-tite Motorsports, the industry leader in quick-connect fluid fittings knows this and has developed 1/4-inch straight thread kits for both gearboxes.

Unlike competitor's transmission kits, you'll enjoy leak-free tranny swaps thanks to Jiffy-tite's patented quick disconnect fittings' valve connection at both the socket and plug, providing a slip-proof connection with minimal flow restriction.

Unlike an old fashioned threaded fitting set-up, this innovative kit allows you to connect or disconnect the cooler line in seconds with no tools. There's absolutely no wrenching required for a high flow, leak proof seal. To connect, simply pull the socket collar back and insert the male plug on the cooler line. Then release the collar.

For more information about the easy to use 2000, 3000 & 5000 series Jiffy-tite Quick-Connect Fluid Fittings, or any of their Quick Connect systems, please call Duane LaFleur at Jiffy-tite Motorsports: 1-888-605-7788, or visit www.jiffy-tite.com.
