

**All new, all Borgeson.  
Saginaw C2&C3 Manual Steering Box**

Through a recent acquisition Borgeson Universal Company is now the original equipment manufacturer and re-manufacturer of Saginaw manual steering gears.

Borgeson is now manufacturing all new, OEM 63-67 and 68-82 Corvette manual steering gears in their Torrington CT facility. This is the true OEM Corvette gear built to the original specifications and drawings from Saginaw, not an off-shore copy. Each gear features a precision machined casting created from the original tooling coupled with all new internals manufactured by Borgeson. Each gear is carefully assembled, inspected and tested to Borgeson's precise specifications.

Borgeson Universal Company is proud to carry forward the American heritage of Saginaw manual steering by manufacturing and supporting the line of Saginaw manual steering gears in the USA. With over 98 years' experience in precision manufacturing and machining Borgeson will apply its same standards of manufacturing excellence to the Saginaw manual steering line as it does its current line of quality steering components.

Borgeson C2&C3 Corvette Manual Steering Box \$395.00
