**For Immediate Release**

### **Granatelli S197 Mustang Rear Shock Tower Brace**

**Oxnard, CA — January 7, 2013** - S197 Mustangs are a uni-body design which means they don't have a full frame and are prone to power robbing torsional flex. So, what can you do? Install a Granatelli Rear Shock Tower Brace (P/N GM-STBR0507), which fits Coyote Mustangs along with the older generation 2005-2010 S197 Mustangs. It helps limit torsional flex while increasing chassis rigidity and feel. As an integral component of the Granatelli 1G suspension system, the Granatelli Rear Shock Tower Braces is the ideal companion to one of Granatelli' three engine bay braces (available separately). Each kit includes a mandrel bent stainless steel brace with precision welds and all necessary hardware. Of course, it wouldn't be complete without a show quality polished finish. Installation requires welding and approximately 2 hours of your time.

Granatelli Rear Shock Tower Braces are available wherever Granatelli Motor Sports' product is sold. For more information, please call 805-486-6644 or visit [www.GranatelliMotorSports.com](http://www.GranatelliMotorSports.com).
