New Ultra Duty Diesel Starters from Powermaster

West Chicago, IL

Powermaster Performance of West Chicago, IL introduces performance starter upgrades for GM, Ford, and Dodge diesel applications. With 2.7kW, 3.6 HP motors, these starters are able to turn over the most aggressive diesel engines in the harshest of environments.

Diesel trucks are asked to do more than any other vehicle on the road. When depended on for work, more often than play, it is important that a starter will work when the truck is needed most. Whether needed for plowing snow, hauling the race car to the track, or simply making it to the jobsite, Powermaster takes pride in keeping vehicles on the road with a dependable USA built product.

Powermaster products are built in the USA with new components for long life and are up to 30% less cost than a factory replacement starter. Along with a one year warranty, Powermaster products can be factory refurbished for the life of the starter or alternator.

Contact Powermaster tech support at 630-849-7754, tech@powermasterperformance.com or visit www.powermasterperformance.com for more information.
