Burns Stainless Unveils New Stainless Steel Exhaust Header Polish!

Burns Stainless releases their revolutionary stainless steel and Inconel® polish to the public! **"Manifold Destiny" has been developed and used by Burns Stainless specifically for cleaning and polishing stainless steel and Inconel® exhaust components that have been discolored, stained, or oxidized.** The formula also works wonders on other hard metals such as chrome. Vince Roman of Burns Stainless comments; "Wanting to address the numerous customer requests for a stainless steel polish for exhaust headers, we conducted a rigorous testing program to develop our carefully balanced polishing compound." The compound is aggressive enough to revive severely discolored exhaust headers, yet fine enough to leave behind a smooth mirror-like finish on bright polished stainless steel exhaust tips. The product is ideal for both race car teams as well as hot rod enthusiasts. It will work wonders on your barbecue grill too!

2 oz. & 8 oz. sizes are available, both priced competitively with the company's new pricing structure. For more information on the polish and the new pricing structure, visit the Burns Stainless booth #20170 at the SEMA Show or the website www.BurnsStainless.com

*Who is Burns Stainless? **Burns Stainless is a provider of high quality exhaust components for the professional racer and fabricator.** The company also provides engineering services for specific racing applications including exhaust collector and header design.*
