## New Total Seal® Break-In Lubricants

Announcing a new series of high performance Break-In Oils and lubricants formulated for Total Seal® by DRIVEN Racing Oil, born from Joe Gibbs Racing. These unique lubricants provide the highest levels of zinc and phosphorus for optimum ring seating during that critical initial break-in period...for maximum performance and prolonged ring life, make sure you break-in your engine right!

Total Seal's new formulations feature petroleum oil to provide the highest levels of zinc and phosphorus. The additive package promotes superior ring seating while providing maximum protection during initial break-in, and requires no additional additives. They are all compatible with methanol and high-octane race fuels, and are specifically designed for optimum ring seating

Formulations now available: BR10 Break-In Oil, Exclusively Formulated for TOTAL SEAL®, with a viscosity typical of SAE 0W-10. BR 30 Break-In Oil with a viscosity typical of SAE 5W-30, BR Break-In Oil with a viscosity typical of SAE 15W-50, and Total Seal Assembly Lube.

The Assembly Lube provides a tenacious yet fluid film to protect reciprocating and rotating components during assembly and initial break-in.

For more information on these new line of break in lubricants, and the complete offering of Total Seal® piston rings and accessories, contact Total Seal®, *Home of the Gapless® Piston Ring.*
