B-Body Mopar Full Perimeter Chassis

Schwartz Performance now offers its G-Machine full perimeter chassis for 1968–1970 Road Runners, Coronets and Chargers!

The full length chassis is designed to bolt under your classic Mopar uni-body without having to cut any part of the floor. The efficient frame design increases rigidity and decreases weight (by 75 pounds) by replacing the entire front sub-frame, steering and rear suspension. The modern geometry and race-bred components of our G-Machine Chassis deliver a pro-touring stance with 1.08g in the corners and luxury-car comfort on the street (without sacrificing any ground clearance).

The front suspension features upper A-arms fit with needle-bearings that are engineered with separate camber and caster adjustments (without using shims). In the rear you'll find a four-bar system with teflon-lined spherical rod-ends for bind-free operation and a smooth ride. The Schwarz chassis incorporates longer shocks at all four corners than any other chassis to improve the overall handling and tuning of the suspension.

Care to bolt-in a modern Hemi or stick with a traditional big block for power? The G-Machine chassis are designed for nearly all Mopar drivetrains and feature an adjustable transmission mount. If you want performance, handling and comfort in your Mopar, go to www.schwartzperformance.com to start building your own chassis!

The Nuts and Bolts

- Replace the weak uni-body construction with a performance engineered chassis
- Saves 75 pounds over the factory components
- Separate camber and caster adjustments with no shims required
- Upper control arms designed with needle bearings – no bushings
- Four-bar rear suspension with Teflon-lined spherical rod-ends
- Engine and transmission mounts for nearly all drivetrain combinations

Schwartz Performance was founded on the premise that race-car performance can be had with street-car convenience, reliability and comfort. We offer over 20 models of chassis for GM, Ford and Mopar
