

MSD PRO-BILLET FORD DISTRIBUTORS with STEEL GEARS

Ford enthusiasts need to pay close attention to the compatibility between their distributor gear and camshaft gear. It's important to note that hydraulic roller cams require a steel distributor gear and MSD is making this swap easy with their new line of Pro-Billet Distributors!

MSD now offers a line of Ford distributors that are supplied with the correct steel gear for use with hydraulic roller cams. Not only do you get the correct gear already installed, but this distributor delivers incredible strength and precision with its CNC machined billet housing. For high rpm stability, the distributor shaft is guided by a sealed ball bearing while a proven, maintenance-free magnetic pickup produces accurate trigger signals.

For tuning, the distributor features MSD's easy-to-adjust mechanical advance and is supplied with different springs and stop bushings. Complementing the mechanical advance, there is also a vacuum advance that can aid in economy as well as idle and other driveability aspects.

These distributors require an MSD ignition control such as a 6AL or 7AL-2 and are available for the following engines:

PN 84771 - Ford 351C-460
PN 84781 - Dist. Ford 351W
PN 84791 - Dist. Ford 289-302

For more information on the new steel gear, vacuum advance Pro-Billet Distributors, go to: www.msperformance.com or call 915-855-7123 or contact Silver Gomez, sgomez@msperformance.com, 915-856-2480.
