**For Immediate Release**

### **Granatelli Motor Sports Performance Ignition Wires**

**Oxnard, CA** – Available now is the Granatelli Motor Sports Performance Ignition Wires.

These wires are a direct OEM replacement wire set and are OBD-II computer safe. These wires have been tested to increase power to the spark plug by up to 400% over the stock ignition wires. Customers have reported up to 15HP increases on naturally aspirated applications and up to 35HP on forced inducted applications. Average gains on an

otherwise stock motor are 5HP naturally aspirated application and 12HP to 15HP on factory forced Induction. These wires have “0” ohms of resistance due to the solid stainless steel braided inner core. Using our patented EMI / RFI noise suppression rings, all interference is eliminated.

Our ignition patented design also works with all fuel injection systems, street cars and race cars. They feature a solid stainless steel connector cable with a stainless snap lock spark plug connectors. The wires use high temperature silicone boots, an 8mm jacket with fiberglass-reinforced braid; they resist temperatures up to 500 degrees.

They are ideal for use with aftermarket headers and/or turbocharger systems. Each set includes all the necessary hardware for install and there are over 600 different fitments.
