Billet Hood Hinges for '60-'66 Chevy Trucks

Smooth functionality with outstanding appearance is designed into every set of Eddie Motorsports' Billet Hood Hinges and their latest addition is for the popular 1960-1966 Chevy truck!

These **Billet Hood Hinges** are designed as a direct bolt-on to update the standard (and probably worn out) stamped factory and spring assembly. Eddie's hinges are CNC-machined from 6061-T6 aluminum to provide a secure foundation for the weight of the stock truck hood. To ensure smooth operation, sealed bearings are incorporated at every pivot point to ensure long lasting action.

Complementing the added strength of the billet components, Eddie uses a nitrogen pressurized strut that is strong enough to hold the hood open throughout shows and cruise nights. The strut is finished in stainless steel and looks as good as it works with the entire Billet Hinge assembly. To complete the installation, each kit is supplied with stainless steel retainers for the body mount and the hood.

- **CNC-machined 6061-T6 aluminum hinges deliver superior strength with great looks**
- **Compact nitrogen filled stainless steel strut will secure the big Chevy hood when raised**
- **Sealed bearings ensure smooth operation at each pivot point**
- **Stock mounting locations with adjustment slots ease installation and alignment**
- **Supplied with stainless steel mounting hardware**
- **Available polished, machined or in a number of anodized and Fusioncoated colors**
- **Engineered and machined in Rancho Cucamonga, California**

Bite Size:

For anyone with a '60-'66 series Chevy truck, Eddie Motorsports' new Billet Hood Hinges will clean up the engine compartment while improving the movement of the hood!
