PRESS RELEASE

Quarter Master[®] Carbon Fiber Driveshaft For Dirt Late Models

Driveline innovator unveils lightest, strongest carbon fiber driveshaft ever designed for Dirt Late Model applications

The new Quarter Master[®] Carbon Fiber Driveshaft for Dirt Late Models was engineered using the highest strength aerospace-grade materials, making it much lighter and more durable than any other competing aluminum or carbon fiber driveshaft available today.

Weighing less than 4.0 lbs. (39" length, weight varies by length), the Quarter Master[®] Carbon Fiber Driveshaft for Dirt Late Models offers maximum weight reduction and decreased MOI (moment-of-inertia) that provides for more immediate acceleration and deceleration in and out of the corners where acceleration is a premium. The Quarter Master[®] Carbon Fiber Driveshaft has an approximate weight savings of 1.5 lbs. over rival manufacturers' carbon driveshafts and 2.0 lbs. over aluminum driveshafts.

This weight reduction is accomplished with no sacrifice in strength, as the 3.0" diameter Quarter Master[®] Carbon Fiber Driveshaft was torque tested at over 4000 ft./lbs., making it the most rugged and durable driveshaft on the market. The directionally orientated space-grade carbon maximizes torsional strength both radially and laterally, which equates to the ability to perform under the most extreme conditions in the highest operating RPM range.

Finished with a smooth, non-load bearing composite outer layer and lightweight, black-anodized, billet aluminum ends using standard 1310 U-joints, the Quarter Master[®] Carbon Fiber Driveshaft is not only the strongest, lightest and most durable driveshaft available for Dirt Late Models but is also the best looking. The driveshaft is also available in white for those series, sanctioning bodies and tracks that require a white driveshaft.

For more information about the Quarter Master[®] Carbon Fiber Driveshaft for Dirt Late Models, call us at 1-888-258-8241, or visit us online at www.quartermasterusa.com.

Quick Summary

Product: Quarter Master® Carbon Fiber Driveshaft for Dirt Late Models

Part Number: #190390 (39.0" Length); #190382 (38.5" Length);
#190380 (38.0" Length); #190370 (37.0" Length); #190362 (36.5" Length);
#190360 (36.0" Length); #190352 (35.5" Length); #190350 (35.0" Length);
#190340 (34.0" Length)

Features & Benefits:

- Carbon fiber driveshaft offers maximum weight reduction & decreased MOI for more immediate acceleration & deceleration on the dirt track
- Directionally orientated carbon maximizes torsional strength both radially & laterally to improve performance in extreme conditions
- Durable & lightweight; 39" shaft weighs less than 4.0 lbs
- Saves approximately 1.5 lbs. over carbon driveshafts & 2.0 lbs. over aluminum driveshafts
- Torque tested at over 4000 ft. lbs., making it the most durable driveshaft available
- Non-load bearing sacrificial outer layer improves safety
- Available in standard black or white versions

Part #190390
