

NEW PRODUCT RELEASE

Flowmaster proudly announces a new addition to their line-up of 409S stainless steel products. This kit, developed for the 2000-2006 Toyota Tundra V8, is manufactured from heavy gauge stainless. Incorporating a custom-engineered muffler/resonator assembly, the dual-tailpipe kit bolts on directly behind the factory cats for an emissions-legal fit. While the interior of the truck will have a moderate sound, the exterior offers a bold, aggressive tone from the dual 2.5" tailpipes and polished Flowmaster-embossed 3" tips. This kit comes complete with detailed instructions and all necessary hardware for an easy at-home installation, and includes tailpipe extensions to exit the pipes straight out under the rear bumper, or out the sides, behind each rear tire. As with all Flowmaster stainless steel products, this kit includes a limited lifetime warranty for long-term confidence.

- **Stainless Steel Construction**
- **Great Flowmaster Performance Sound**
- **Easy At-Home Installation**
- **Limited Lifetime Warranty**
- **Dyno Tuned For Maximum Performance**

409S[®] Stainless Steel
