

**NEW PRODUCT RELEASE**

Need a little more power from your F150 when you're pulling your trailer or boat? Flowmaster has the key to unlocking your engine's potential with its newest stainless steel exhaust system engineered for the 1998–2003 Ford F150 pickups equipped with either the 4.6L or 5.4L V8 engine. The single-pipe system gives the truck a mild interior tone with a deep, but moderate performance tone outside while also adding noticeable levels of towing power and increased gas mileage. The 3" a mandrel-bent system connects directly to the factory 2.5" cat-pipe and can be easily installed at home using basic tools. The system features a Super 50 Series muffler and a single tailpipe that exits behind the right rear tire with a large 3.5" polished T304 stainless steel tip. The system comes complete with detailed step-by-step instructions and all necessary installation hardware. As with all Flowmaster 409S stainless steel exhaust products this system is covered by a limited lifetime warranty.

- **Stainless Steel Construction**
- **Mild Interior Sound Level**
