

For C6 Corvette owners looking for the ideal performance exhaust, Flowmaster proudly introduces our part number 817512. This durable 409S stainless steel Force II system is engineered as a bolt-on Axle-back exhaust for the 2005-2008 Corvette (except Z06) and features specifically-engineered 60 Series mufflers that bolt directly to the car's OE exhaust using fully mandrel-bent tubing. Offering a moderate exterior sound with a mild tone inside, this system also provides the performance gains you expect from Flowmaster. Exiting in the stock location, the exhaust features dual 3.50" outlet polished stainless tips on each muffler for the 'quad' exhaust look. Included with the system are detailed installation instructions along with all needed hardware for easy at-home or professional installation. As with all Flowmaster stainless exhaust systems, our Limited Lifetime Warranty provides assurance of our commitment to quality.
