

COMP Cams® Two-Piece Adjustable Guide Plates For Chevy & Ford Engines

Innovative guide plate design from valve train technology leader is fully adjustable to aid with valve centerline modifications made to aftermarket cylinder heads

Cylinder head modification can net some serious performance gains. However, once the valve centerlines have been moved, you sometimes have to bend or cut stock guide plates in order to compensate. To solve this common dilemma with aftermarket heads, COMP Cams® recently developed an all-new line of Two-Piece Adjustable Guide Plates for high performance Small Block Chevy V8 and 90° V6, along with Small Block Ford V8, engine applications.

Created from precision die-stamped and heat-treated steel material for a closer setting and improved durability, these fully adjustable guide plates feature an interlocking design that enables a reliable and true adjustment in the one axis needed for most valves. This prevents issues associated with prying or cutting the guide plate, which often make it difficult to line up prior to welding.

In addition, these guide plates can easily be adjusted inward or outward for maximum convenience. And for more stability, they can be finish-welded once the final adjustments are made. These performance guide plates work with all RHS® cylinder heads, as well as other popular cylinder head brands in the performance aftermarket, both stock and those that feature relocated intake ports.

For the serious racer or high performance engine builder with aftermarket Small Block Chevy or Small Block Ford cylinder heads, these new guide plates are a “must have” item. Designed for use with studs that have 7/16" base threads, they are available in sets of eight for 5/16" diameter pushrods. For more information about the COMP Cams® Two-Piece Adjustable Guide Plates or any other COMP Cams® product, call us toll free at 1-800-999-0853, or visit us online at www.compcams.com.

Quick Summary

Product: COMP Cams® Two-Piece Adjustable Guide Plates

Part Number: #4835-8 (SBC/SBF 5/16")

Features & Benefits:

- Precision die-stamped & heat-treated steel for improved durability & closer setting
- Interlocking design easily adjusts inward or outward to prevents cutting of guide plates
- Necessary for Small Block Chevy & Small Block Ford aftermarket heads with moved valve centerlines
- Can be welded once adjustments are final
- Work with all RHS® and some popular aftermarket cylinders, both stock and with relocated intake ports
