

COMP Cams[®] & RHS[®] Sweeten The Pot For IMCA Super Nationals

With the biggest annual event for the IMCA sanction rapidly approaching, COMP Cams[®] and Racing Head Service[®] have stepped up to add additional incentives to drivers

When drivers in the various IMCA divisions are asked which accolades they would most like to obtain each year, there are two answers typically provided. The first response is usually that they would like to claim the IMCA National Championship in their respective division, and the second response, more often than not, is that they want to win their division at the IMCA Super Nationals that are held each year at Boone Speedway in Boone, Iowa.

The program is headlined by the IMCA Modifieds, SportMods, Hobby Stocks, Street Stocks and Late Models. The 2009 event drew an amazing total of 816 entries in the five divisions. This year, the 27th Annual IMCA Super Nationals will be held September 6th-11th, 2010, and is once again expected to draw the masses to the small Iowa town. And with the nation's best IMCA competitors taking aim at the coveted IMCA Super Nationals titles, COMP Cams[®] and RHS[®] have stepped up to provide several cash and contingency prizes for the competition.

For the IMCA Open Wheel Modified division, several prizes from COMP Cams[®] have been brought to the table. The front row qualifiers for Saturday's finale will each receive a custom flat tappet camshaft. A \$500 cash bonus has also been posted for the champion of the event if that driver is running a 24" COMP Cams[®] decal on the nose of his or her car for the A main event. Each driver who finishes in the top five in Saturday's finale will receive a \$100 product certificate. Another \$100 product certificate will go to the driver with the longest tow who qualifies for the feature event. In addition, a \$100 COMP Cams[®] product certificate will be awarded to the first non-qualifier from each of Saturday's last chance qualifying events. RHS[®] has also posted a set of cylinder heads to a random driver who experiences trouble during the weeklong event.

The IMCA Stock Car division will see COMP Cams[®] award a custom flat tappet camshaft to the front row qualifiers for Saturday's championship feature. In addition, COMP Cams[®] will award a \$100 product certificate to the first non-qualifier from Wednesday, Thursday and Friday's qualifying features. RHS[®] will also award a set of cylinder heads to a random driver who experiences trouble during the week.

Next, in the Hobby Stock division COMP Cams[®] will award a \$100 product certificate to the first non-qualifier from Monday and Tuesday's qualifying features while also providing \$100 product certificate to the first non-qualifier from Monday's last chance qualifying features for the Late Model division. And finally, in the SportMod division, a \$100 product certificate from COMP Cams[®] will be provided to the first non-qualifier from Monday and Tuesday's qualifying features.

Not only will COMP Cams[®] and RHS[®] provide several thousand dollars worth of prizes for the event, but the two companies will also have a full team of field support representatives on hand for the weeklong event to ensure that customers are receiving top performance from their components. COMP Cams[®] and RHS[®] are both committed to keeping their clients at the front of the pack.
