

COMP Cams® Endure-X™ Solid Roller Lifters With Inboard Link Bars For Chryslers

COMP Cams® expands line of popular lifters to include Chrysler applications

When engineers originally designed the Chrysler engine block, they created it to be used with a Hemi-style cylinder head and a 59-degree lifter bore. Due to production costs and other issues, the design was changed to work with a wedge-style cylinder head instead but the 59-degree lifter bores remained, causing the need for a special lifter to work with that angle.

Engineers at COMP Cams® have designed a unique reverse link bar assembly specifically for these Chrysler 59-Degree LA and Magnum-Style Small Block applications. The link bar has been moved to the inside of the lifters so that grinding the block will be unnecessary, and pushrod clearance is no longer an issue. These lifters will also work in all standard bank angle blocks.

Heat-treated and machined to ultra-high tolerances, the Endure-X™ Solid Roller Lifters With Inboard Link Bars for Chryslers have set the new industry standard. EDM Oil Injection™ Technology is a standard feature of all COMP Cams® Endure-X™ Lifters and guarantees that the bearing assembly receives a constant flow of pressurized oil via a precision hole aimed directly at the needle bearings. These needle bearings are precision sorted by size to distribute load evenly, preventing premature wear and failure. And finally, the axle is made of wear resistant Tool Steel to prolong the life of the roller assembly, particularly in high rpm applications.

For more information about the COMP Cams® Endure-X™ Solid Roller Lifters with Inboard Link Bars for Chryslers or any other COMP Cams® product, call us at 1-800-999-0853, or visit us online at www.compcams.com.

Part #8043-2

Quick Summary

Product: COMP Cams® Endure-X™ Solid Roller Lifters with Inboard Link Bars for Chryslers

Part Number: #8043-16 (Full Set); #8043-2 (Set of 2)

Features & Benefits:

- Reversed link bar assembly designed specifically for 59-degree LA & Magnum-Style Chrysler Small Blocks
- EDM Oil Injection™ Technology protects needle bearings with constant pressurized oil flow
- Tool Steel axle prolongs roller assembly life
- Heat-treated and machined to ultra-high tolerances
