

Custom Cam Grinds For Motown LS Engine Blocks

New cam cores for the World Products Motown LS engine block are now exclusively engineered & supplied by valve train leader, COMP Cams®

There's no doubting the fact that GM engine technology has seen a revolution with the new Motown LS engine block from World Products. It basically consists of a Small Block Chevy hybrid engine that enables the use of LS cylinder heads. But there's even more to this development – engineers at COMP Cams® received a call to exclusively design a series of custom cam grinds for this one-of-a-kind engine block. The unique characteristic of the COMP Cams® Motown LS Custom Grinds is that each camshaft is designed with a Small Block Chevy camshaft size, fuel pump lobe and distributor gear. However, the remaining lobe profiles are engineered for the LS engine series. During the design phase of these cams, COMP Cams® also developed several other profiles to match various other LS engine applications.

What truly makes these cores better are the high-quality material, proprietary engineering methods and the unique distributor gear compatibility. The new grinds also feature a host of other distinctive features that provide superior power gains with the Motown LS block. The high-strength 8620 steel billet material and Everwear gear increase valve train stability and reduce wear, while also allowing compatibility with a cast iron distributor gear. Available in both hydraulic roller and solid roller core configurations, these custom cam grinds are designed for both street/strip enthusiasts and hardcore drag racing competitors. And in addition to the standard bearing applications, roller bearing applications are also attainable for reduced valve train wear.

For more information about the COMP Cams® Motown LS Custom Camshaft Grinds or any other COMP Cams® product, call 1-800-999-0853 or visit us online at www.compcams.com.

Quick Summary

Product: COMP Cams® Custom Cam Grinds for Motown LS Engine Block

Part Number: #178-000-12 (Custom Ground to Specs)

Features & Benefits:

- Custom ground cams designed exclusively for the Motown LS engine block applications
- Features SBC size, fuel pump lobe and distributor gear with other LS lobe profiles
- Made from 8620 steel billet material with Everwear gear to reduce valve train wear & permit use of a cast iron distributor gear
- Available in hydraulic & solid roller core configurations
- Standard or roller bearing applications available for reduced bearing wear
