

Third FAST™ XFI™ Fuel Injection Training Course Open For Enrollment & Scheduled To Coincide With PRI

The next XFI™ class presented by FAST™ and EFI University, scheduled for December 8, 2010, at the Orange County Convention Center in Orlando, FL, is now open for enrollment

The first XFI™ Training Class held by FAST™ and EFI University in Memphis, TN, was a huge hit and sold out. The second class, held in Mira Loma, CA, was equally successful. Now, the third course has been officially announced. On December 8th, 2010, one day before the Performance Racing Industry tradeshow, you can come to Orlando, FL for a day-long event covering basic and advanced techniques for setting up and tuning the FAST™ XFI™ Fuel Injection System.

With the recent news that NASCAR is heading toward EFI systems, and with others sure to follow, this is a great opportunity for engine builders to learn the technology of the very near future. Whether you're interested in circle track, drag strip or street, you will discover new secrets and tips at PRI and the XFI™ Training Class. Over the course of the day, students will be given an in-depth look at everything from phasing the distributor to gaining an advantage at the track with the XFI™ optional Intelligent Traction Control™ feature.

Both PRI and FAST™ are extremely excited to have accomplished EFI instructor and tuning guru, Brian Macy, share his tuning knowledge and experience with attendees. The FAST™ technical support staff will also be on-hand to help educate students on how to use cutting-edge EFI technology to improve engine performance.

With the first two FAST™ XFI™ Fuel Injection Training Courses already over, your next chance to attend will be at the Orange County Convention Center in Orlando, FL, on December 8, 2010, one day before the PRI tradeshow. These popular classes sell out quickly so reserve your place today if you want to attend. Registration is \$495.00, but time is running out and space is limited.
