

Quarter Master® Ultra-Duty Starters

Aftermarket starter from Quarter Master® provides premium alternative to lesser quality starters, giving you optimal street/race performance & durability

Cheap starters are a dime a dozen, which is why many racers often choose to buy one of them in hopes of saving money. What most don't realize is that a cheap, poorly designed starter is doomed for failure if it tries to keep up with performance engine upgrades and heavy-duty aftermarket components. As a result, starter failures are a common problem among racers and street performance enthusiasts, but Quarter Master® has developed a line of premium starters to combat this issue.

Engineered by racers for racers, Quarter Master® Ultra-Duty Starters are designed to be a durable, reliable component that can be depended on time and time again, allowing you to save money in the long run by purchasing only one starter as opposed to buying several cheaper units.

Made using top-quality Hitachi components that are blueprinted, assembled and tested at the Quarter Master® facility outside of Chicago, Ultra-Duty Starters are available for popular high performance Chevy, Ford and Chrysler applications. Features of this premium 1.4kw starter include gear reduction engineering for increased torque, CNC-machined adapter mounts for precise flywheel fit and a unique pinion gear with a lightweight head to enable much tighter tolerances in run-out, which makes for highly efficient flywheel engagement.

In addition to premium quality components, these starters also utilize a heavy-duty solenoid and ball bearing construction to withstand the higher engine temperatures and other demands of high compression engines. After assembly, each individual unit undergoes rigorous dyno testing to ensure the ultimate in performance and durability when you need it the most – on the strip. For more information about the Quarter Master® Ultra-Duty Starters or any other Quarter Master® product, call us at 1-888-CLUTCH-1 or visit us online at www.quartermasterusa.com.

Quick Summary

Product: Quarter Master® Ultra-Duty Starters

Part Number: #114280 (Chevy 153 & 168-Tooth Flywheels); #114360 (Ford); #114250 (OEM Chrysler); #114285 (Chevy 153-Tooth Flywheel w/ LW Starter Mount)

Features & Benefits:

- Premium starters for Chevy, Ford & Chrysler radical street & drag race engines
- 1.4kw of cranking power handles high compression engines
- Heavy-duty solenoid & bearing assembly tolerates harsh operating conditions (heat, moisture, etc)
- Pinion gear design reduces weight & eliminates run-out
- Individual dyno testing on each unit before shipment
