

## Wegner Motorsports E85 Street Carburetors

**Two new ethanol-compatible carburetors deliver excellent streetable performance and are fully dyno-tested to ensure excellent power, mileage and drivability**

Premium gasoline is expensive, as everyone knows. If you require even higher octane fuel for your high compression street engine, stirring in a little racing fuel will cost you plenty. Wegner Motorsports' new E85 Street Avenger (PN# WCW-80770-85) and Double Pumper (PN# WCW-47795-85) Carburetors may be the perfect solution to the high price of fuel by delivering excellent performance on high octane E85 fuel. Designed and assembled by the highly successful folks at Wegner Motorsports who have been in the NASCAR racing engine business for the past 33 years, these carburetors are an excellent (and clean running) alternative fuel induction system.

The Wegner Motorsports carburetors come in two styles: the Street Avenger E85 Carburetor rated at 815cfm and featuring vacuum "secondaries" and the Double Pumper E85, which is rated at 840cfm and uses a mechanical secondary system. Both carburetors are fully street-use compatible and have electric chokes. Every Wegner carburetor is hand-assembled and dyno-tested for power generation, fuel mileage and drivability. Wegner Motorsports is an authorized Holley Carburetor dealer.
