

## Wegner Motorsports Street Performance 327 LS Engines

**Four different levels of 327-cid LS-style GM Small Blocks are now available, designed to deliver a dyno-verified 500 horsepower and 426 ft./lbs. of torque**

Crate engines have long been a popular choice with performance street engine fans for their simplicity and performance guarantee. But having a great brand name and the ability to select just the right engine for your needs has often been difficult – until now. The new Wegner Motorsport 327 line-up of crate engines features everything you need from a basic performance short block through three stages of upgrade, including the SP327P premium engine package. Each engine level uses brand new premium Wegner Motorsports track-tested components.

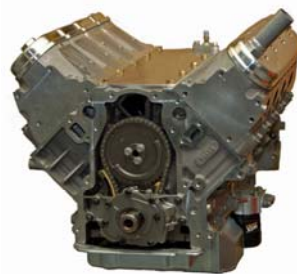

The Wegner Motorsports Street Performance 327 LS can be purchased as the short block (SP327S), long block (SP327T), complete engine (SP327C) and premium engine (SP327P). All four of these engines utilize the new GM 5.3-liter engine block – honed 0.010-inch oversize and decked to 9.9235-inches. A custom finished stock crankshaft and LQ9 bushed connecting rods with ARP bolts and custom-forged aluminum pistons are used in every engine. Wegner Motorsports engine professionals have selected the appropriate custom-ported cylinder head assemblies, along with just the right camshaft, valve train and induction system components to get you down the road with the best possible combination. You can't purchase a better engine for your high performance street/strip vehicle.
