

Blackout Nitrous System™ For 2005-2010 Ford Mustang GT

Ford Mustang GT owners can now take advantage of the unprecedented looks, performance and power potential of the ZEX™ Blackout Nitrous Systems™

As the first of its kind, this ZEX™ Blackout Nitrous System™ is engineered to work with the latest in Ford Mustang technology. Unlike a universal kit, every piece has been designed specifically for street/strip and all out drag race, stock or modified, 2005-10 Ford Mustang GT applications.

Blackout Nitrous Systems™ are a fast and easy way to add a significant boost in horsepower to your Mustang. Installation of the system won't affect normal operation but rather gives power on demand with a patented electronic TPS switch for reliable system activation at wide-open throttle; perfect for the Mustang's throttle-by-wire system. Plug and play installation can be completed in as little as two hours, with power settings fully adjustable from 75-175 horsepower with the included tuning jets.

The ZEX™ Blackout Nitrous System™ for 2005-10 Ford Mustang GTs features the signature look of the black powder-coated bottles, carbon fiber look hoses and everything needed for installation, including a must-have billet fuel rail adapter for tapping into the Mustang's updated fuel system. Safer and more efficient operation is achieved through electronic activation and the nitrous system's patented Active Fuel Control™ that automatically adjusts fuel delivery with fluctuations in nitrous bottle pressure so that your engine never runs too rich or too lean while spraying.
