aFe Releases Their New Intercooler Tube Upgrade for 2010 Dodge Ram Cummins with the L6-6.7L (td)

Corona, Ca...advanced FLOW engineering (aFe), an industry leader in performance intakes, filters, manifolds and exhaust systems is pleased to announce the release of their new intercooler tube upgrade for the 2010 Dodge Ram Cummins with the L6-6.7L (td) motors part number **46-20089**.

The intercooler tube is constructed out of huge, mandrel bent 3" 409 stainless steel and is powder-coated for maximum cooling efficiency. Two heavy-duty, 5-ply aramid reinforced couplings give this upgrade the much-needed strength to easily withstand high boost pressures and maintain reliability. All hardware including constant tension t-bolt clamps is supplied for an easy installation. This system also includes a 1/8" NPT bung for gauges and other performance inputs.

In recent testing, part number **46-20089** outflowed the factory intercooler tube by 25%.

Part Number **46-20089** has an MSRP of \$286.25 and is available in stores now.
